EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Morey Wildes on 2/26/09. Applicant agreed to amend the claims to positively claim a housing of the device and to clarify that the device rests in a known orientation.

The application has been amended as follows:

1. (Currently Amended) An autonomous in-vivo device ~~having a longitudinal axis of symmetry~~ comprising:

a housing having a longitudinal axis of symmetry;

an image sensor positioned in said housing to acquire images through a window in a said housing ~~of the device~~; and

a ballast located off the longitudinal axis of symmetry, so that said device, ~~without any counterbalance elements~~, has a center of gravity displaced from the longitudinal axis of symmetry toward said window, such that the device rests in a known orientation.

Claim 2 was cancelled.

In claims 8, 9, 10, 16, and 18, replace all instances of "is to" with --is configured to--.

13. (Currently Amended) An in vivo imaging device comprising:
a housing having a longitudinal axis of symmetry;

a first imager and first optical system in said housing to image in a direction parallel to an axial portion of said in vivo imaging device;

a second imager and second optical system in said housing to image in a direction parallel to a transverse portion of said imaging device; and

a ballast located off ~~a~~ the longitudinal axis of symmetry of the ~~device~~ housing, wherein said device, ~~without any counterbalance elements~~, has a center of gravity displaced from the longitudinal axis of symmetry in the direction of an in vivo area being imaged, such that the device rests in a known orientation.

29. (Currently Amended) A method of in vivo imaging, comprising:

orienting an autonomous in-vivo imaging device with a ballast, ~~said ballast being located off a longitudinal axis of symmetry of the device~~, wherein said device, ~~without any counterbalance elements~~, has a housing having a longitudinal axis of symmetry with said ballast being located off the longitudinal axis of symmetry and causing a center of gravity of the device to be displaced from the longitudinal axis of symmetry in the direction of an in vivo area to be imaged, such that the device rests in a known orientation; and

capturing an image of an in-vivo area perpendicular to the longitudinal axis of symmetry of the device, wherein said ballast is on substantially the same side of the longitudinal axis of the device as the in vivo area imaged.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to MICHAEL T. ROZANSKI whose telephone number is (571)272-1648. The examiner can normally be reached on Monday - Friday, 8-4:30.
